

Hybrid Glycan

Hybrid N-linked oligosaccharide

Catalog Number

SA-HYBRID

Description

Hybrid-type N-glycan (oligosaccharide) with bisecting N-acetyl-glucosamine

Sources

Hybrid-type glycans are found on mammalian and avian glycoproteins including avian ovalbumin. This product is typically purified from the oligosaccharide pool released from hen egg ovalbumin by hydrazinolysis using a combination of HPLC and glycosidase digestion.

Form

Dry. Dried by centrifugal evaporation from an aqueous solution.

Molecular Weight

1642

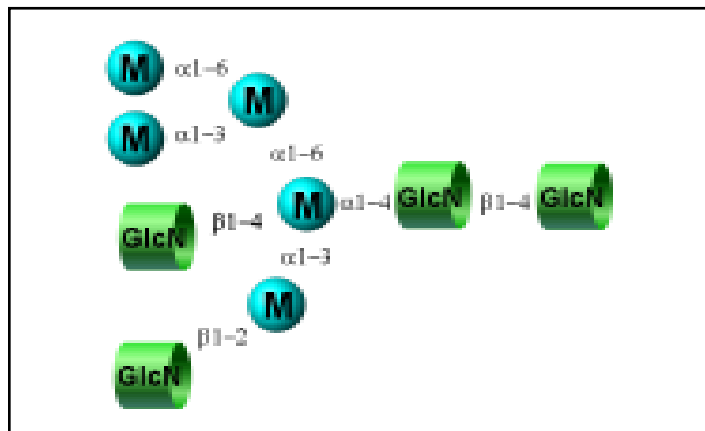

Purity

> 90% pure as assessed by a combination of $^1\text{H-NMR}$ and HPLC.

Storage

Keep at -20°C both before and after dissolution. This product is stable for at least 5 years as supplied.

Shipping: The product can be shipped at ambient when dry. After dissolution, ship on dry ice.

Handling: Allow the unopened vial to reach ambient temperature and tap unopened on a solid surface to ensure that most of the lyophilized material is at the bottom of the vial. Gently remove the cap, add the desired volume of reconstitution medium, re-cap and mix thoroughly to bring all the oligosaccharide into solution. For maximal recovery of oligosaccharide, ensure that the cap lining is also rinsed and centrifuge the reconstituted vial briefly before use. Ensure that any glass, plasticware or solvents used are free of glycosidases and environmental carbohydrates.

Safety

This product is non-hazardous and has been purified from natural sources certified to be free of all hazardous material including pathogenic biological agents.
