

Man-7D1 Glycan

Man-7D1 N-linked oligosaccharide. Oligomannose 7 glycan.

Catalog Number

SA-MAN7D1

Description

Oligomannose-7D1 glycan is highly purified linkage-specific isomer with 7 mannosyl residues.

Sources

Man-7 glycan is found in a wide range of both plant and animal glycoproteins. This product is typically purified from the oligosaccharide pool released from porcine thyroglobulin by hydrazinolysis using a combination of HPLC and glycosidase digestion.

Form

Dry. Dried by centrifugal evaporation from an aqueous solution.

Molecular Weight

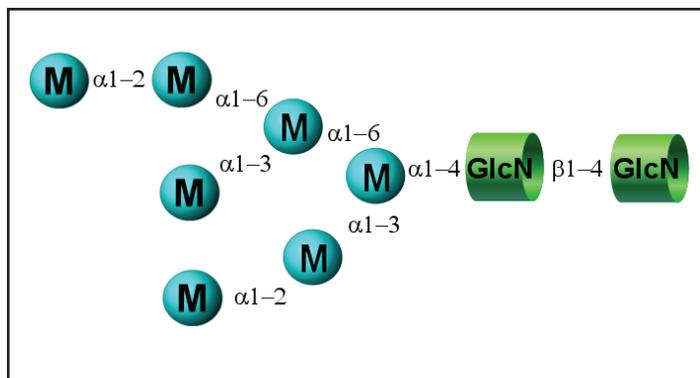

1560

Purity

> 90% pure as assessed by a combination of ¹H-NMR and HPLC.

Shipping

The product can be shipped at ambient when dry. After dissolution, ship on dry ice.

Storage

Keep at -20°C both before and after dissolution. This product is stable for at least 5 years as supplied.

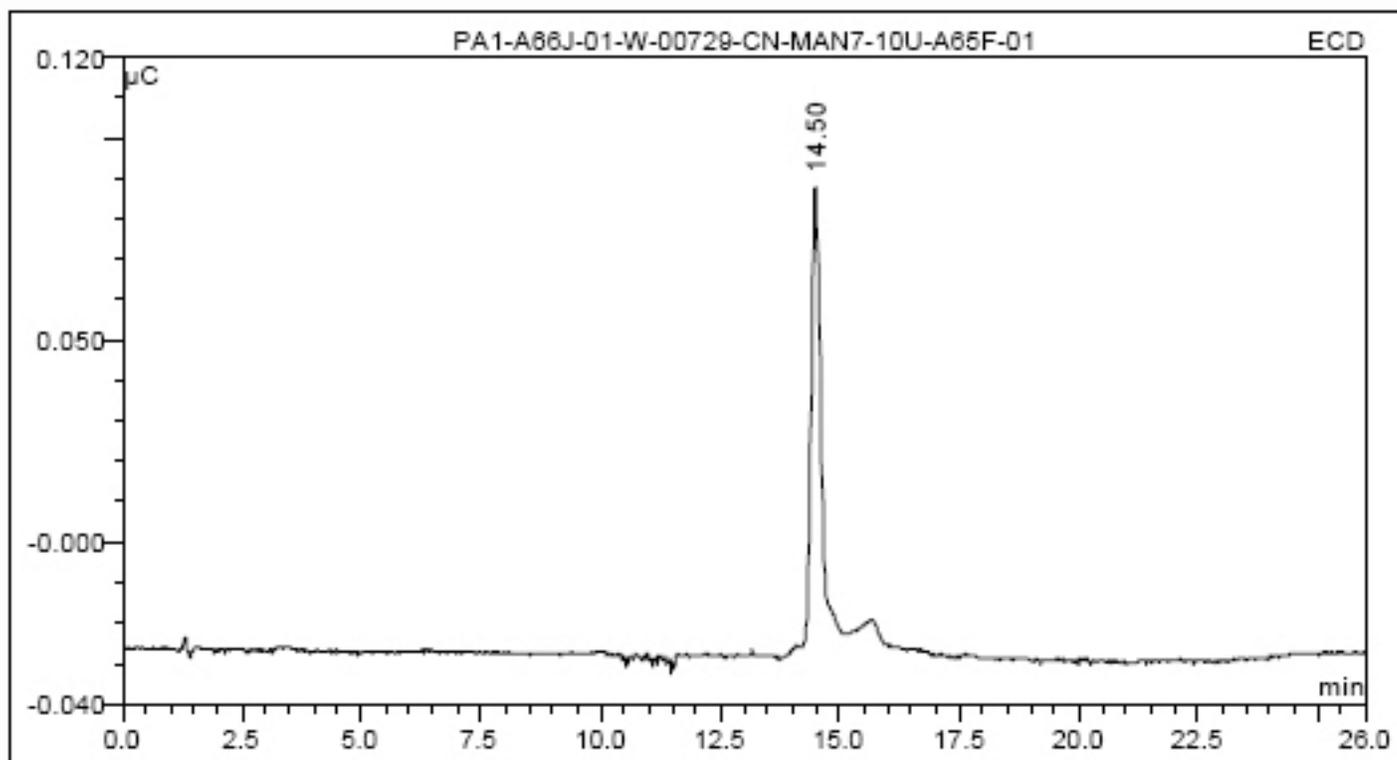

Handling

Allow the unopened vial to reach ambient temperature and tap unopened on a solid surface to ensure that most of the lyophilized material is at the bottom of the vial. Gently remove the cap, add the desired volume of reconstitution medium, re-cap and mix thoroughly to bring all the oligosaccharide into solution. For maximal recovery of oligosaccharide, ensure that the cap lining is also rinsed and centrifuge the reconstituted vial briefly before use. Ensure that any glass, plasticware or solvents used are free of glycosidases and environmental carbohydrates.

Safety

This product is non-hazardous and has been purified from natural sources certified to be free of all hazardous material including pathogenic biological agents.
