

## NA2F Glycan

NA2F N-linked oligosaccharide

## Catalog Number

SA-NA2F

## Description

Asialo-, bi-antennary complex-type N-glycan (oligosaccharide). NA2F is the asialosubstructure of A2F glycan.

## Sources

NA2F glycan is found on several mammalian glycoproteins including IgG, gamma globulins, and many serum glycoproteins. This product is typically purified from the oligosaccharide pool released from porcine thyroglobulin by hydrazinolysis using a combination of HPLC and glycosidase digestion.

## Form

Dry. Dried by centrifugal evaporation from an aqueous solution. Contains ammonium salt to stabilize against desialylation.

## Molecular Weight

1788

## Purity

> 90% pure as assessed by a combination of 1H-NMR and HPLC.

## Storage

Keep at -20°C both before and after dissolution. This product is stable for at least 5 years as supplied.

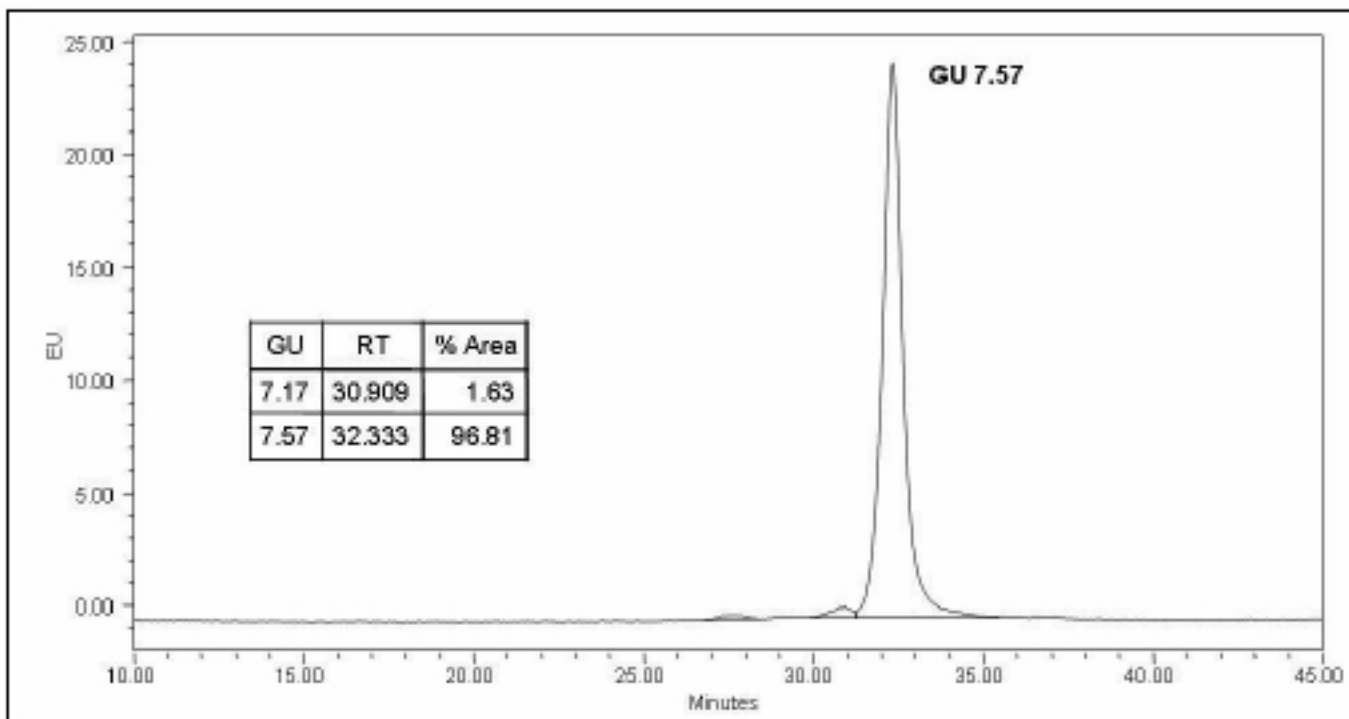

**Shipping:** The product can be shipped at ambient when dry. After dissolution, ship on dry ice.

**Handling:** Allow the unopened vial to reach ambient temperature and tap unopened on a solid surface to ensure that most of the lyophilized material is at the bottom of the vial. Gently remove the cap, add the desired volume of reconstitution medium, re-cap and mix thoroughly to bring all the oligosaccharide into solution. For maximal recovery of oligosaccharide, ensure that the cap lining is also rinsed and centrifuge the reconstituted vial briefly before use. Ensure that any glass, plasticware or solvents used are free of glycosidases and environmental carbohydrates. Minimize exposure to elevated temperatures or extremes of pH.

## Safety

This product is non-hazardous and has been purified from natural sources certified to be free of all hazardous material including pathogenic biological agents.
