

A3 Glycan

Cat. # : CN-A3-x (where x denotes pack size)

Structure

Synonyms : A3 N-linked oligosaccharide.

Description: Tri-sialylated, tri-antennary complex-type N-glycan (oligosaccharide). The product supplied is a mixture of isomers differing in the type of sialic acid linkages (Neu5Ac α 2-3 or Neu5Ac α 2-6) and the Gal residue linkage of one of the arms (Gal β 1-4 or Gal β 1-3). This described in more detail below.

Sources : A3 glyans are found on several mammalian glycoproteins including bovine serum fetuin (bSF). This product is typically purified from the oligosaccharide pool released from bSF by hydrazinolysis using a combination of HPLC and glycosidase digestion.

Form: Dry. Dried by centrifugal evaporation from an aqueous solution containing approximately 50 mmol dm⁻³ of ammonium acetate (added to minimize acid-catalysed desialylation).

Molecular Weight: 2881

Purity: > 90% pure as assessed by a combination of ¹H-NMR and HPLC.

Storage: Refrigerate (-20°C) both before and after dissolution. This product is stable for at least 5 years as supplied.

Shipping: The product can be shipped at ambient when dry. After dissolution, ship on dry ice.

Ludger

Handling: Allow the unopened vial to reach ambient temperature and tap unopened on a solid surface to ensure that most of the lyophilized material is at the bottom of the vial. Gently remove the cap, add the desired volume of reconstitution medium, re-cap and mix thoroughly to bring all the oligosaccharide into solution. For maximal recovery of oligosaccharide, ensure that the cap lining is also rinsed and centrifuge the reconstituted vial briefly before use. Ensure that any glass, plasticware or solvents used are free of glycosidases and environmental carbohydrates.

Safety: This product is non-hazardous and has been purified from natural sources certified to be free of all hazardous material including pathogenic biological agents.

For research use only. Not for human or drug use
